In relation to the Survey of Township Eleven South Range Twenty West of the 6th P.M. begun on the 20th day of August and finished on the 29th day of September A.D. 1888 I made the following report as follows to wit: The Eastern boundary of said Township was found and established by Standard Parallel No 4 as follows and established all corners of said Township and made identified. No trees of the South line could be found from the South West corner of sec. 35 and of the South West Corner this township was established by running in accordance with field notes of Original Survey and Proportionate distance as able which found pits of said Survey but attached to the said pits found new and established corners the same since the last named date.

The Second Standard Parallel North was found from which but few stakes remain. This township was not so many obliterations that nothing could be identified especially the Corners & portions of the same had been lost for years so the same as aid in road Description the Corners were established by the ground of this Township with the exception of the Section Corners which were all established from a stone mound at the corners.

The Meridian this Township bounded by Township 4 North and Range 4 West on Chautauqua and Chautauqua Rivers as Chautauqua and daily Journal & Fairfield Chautauqua their respective duties all of which is hereby respectfully submitted this 8th day of October A.D. 1888.

Martin Allin Co. Surveyor
Elk County Kansas

Plat of Township Eleven South Range twenty west of the 6th P.M. as surveyed by Martin Allin by myself on August 20th and finished on Sept 29th 1888 Scale 2½ inches to the mile
